- A job portal is a web-based application that connects job seekers (students) with employers in a centralized platform.
- It enables students to create profiles, upload resumes, and search for jobs based on skills, location, and experience.
- Employers can post job openings, manage job listings, and efficiently recruit suitable candidates.
- The system provides an organized way to apply for jobs and track application status (Applied, Shortlisted, Rejected).
- It includes secure user authentication and role-based access for students, employers, and administrators.
- The portal sends email notifications to users when they apply for jobs and when their application status is updated.
- The application is developed using technologies like HTML, CSS, JavaScript, Spring Boot (or PHP), and MySQL database.
- Overall, the system improves communication, reduces manual effort, and makes the hiring process faster and more efficient

PROBLEM STATEMENT

1
2
3
4
5
6
7
8
9

The traditional job search and recruitment process is often **manual, time-consuming**, and unorganized. Students find it difficult to search for suitable jobs from multiple sources, while employers struggle to manage large numbers of applications efficiently. There is no centralized platform to track job applications and their status. This leads **to delays, confusion, and missed opportunities** for both job seekers and recruiters. Communication between students and employers is also limited and inefficient. Therefore, there is a need for a **simple, centralized, and automated** job portal system. This system will streamline job **posting, searching, and application tracking**. It will improve efficiency, accuracy, and accessibility for all users.

OBJECTIVE(S)

1
2
3
4
5
6
7
8
9

- To develop a **web-based job portal** that connects students and employers on a single platform.
- To enable **easy job posting, searching, and online application** for efficient recruitment.
- To provide **application tracking and email notifications**, improving communication and transparency.

PROPOSED SYSTEM

1
2
3
4
5
6
7
8
9

- The proposed system is a **web-based job portal** that connects students and employers through a single, centralized platform.
- It provides **secure registration and login** with role-based access for students, employers, and administrators.
- Employers can **post, update, and manage job listings**, reducing dependency on manual recruitment processes.
- Students can **search, filter, and apply for jobs online**, saving time and effort compared to traditional methods.
- The system includes **application status tracking**, allowing users to monitor progress (Applied, Shortlisted, Rejected).
- It solves existing issues by **eliminating scattered job information**, improving organization, and reducing delays in communication.
- **Email notifications** keep users updated about job applications and status changes, ensuring timely communication.
- Compared to current systems, it offers **faster processing, better accessibility, improved accuracy, and enhanced user experience**.

PROPOSED SYSTEM ARCHITECTURE

9

Frontend:

- HTML5
- CSS3

Backend:

- PHP (Core PHP)
- Session Management
- MySQL(Database Connectivity)

Database:

- MySQL
- phpMyAdmin

Tools:

- XAMPP (Apache + MySQL Server)
- Notepad
- Web Browser (Chrome)

Hardware / Software Requirements:

- **System:** Windows 10
- **RAM:** Minimum 4GB
- **Software:** XAMPP Server

MODULE DESCRIPTION

2
3
4
5
6
7
8
9

Module 1: User Management
Handles student and employer registration, login, and profile management with secure authentication.

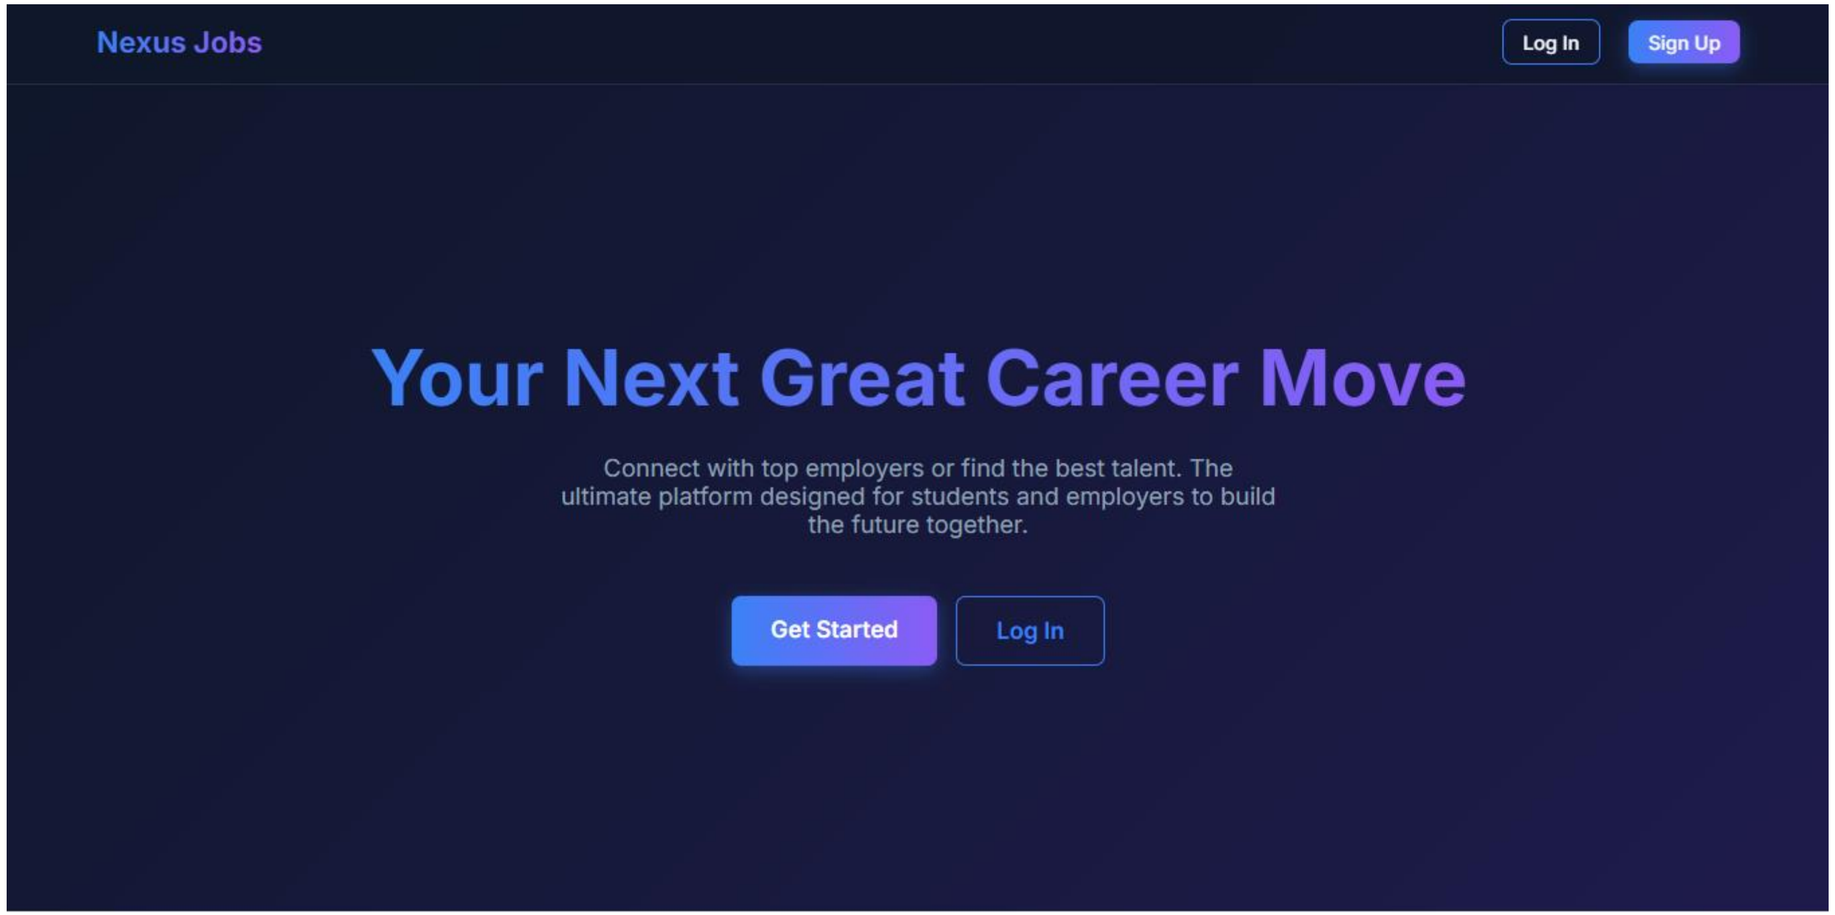
Module 2: Job Management
Allows employers to post, edit, and delete job listings, and enables students to view available jobs.

Module 3: Application Processing
Manages job applications, allowing students to apply and employers to shortlist or reject candidates.

Module 4: Database Management
Stores user details, job information, and application records while ensuring data integrity and retrieval.

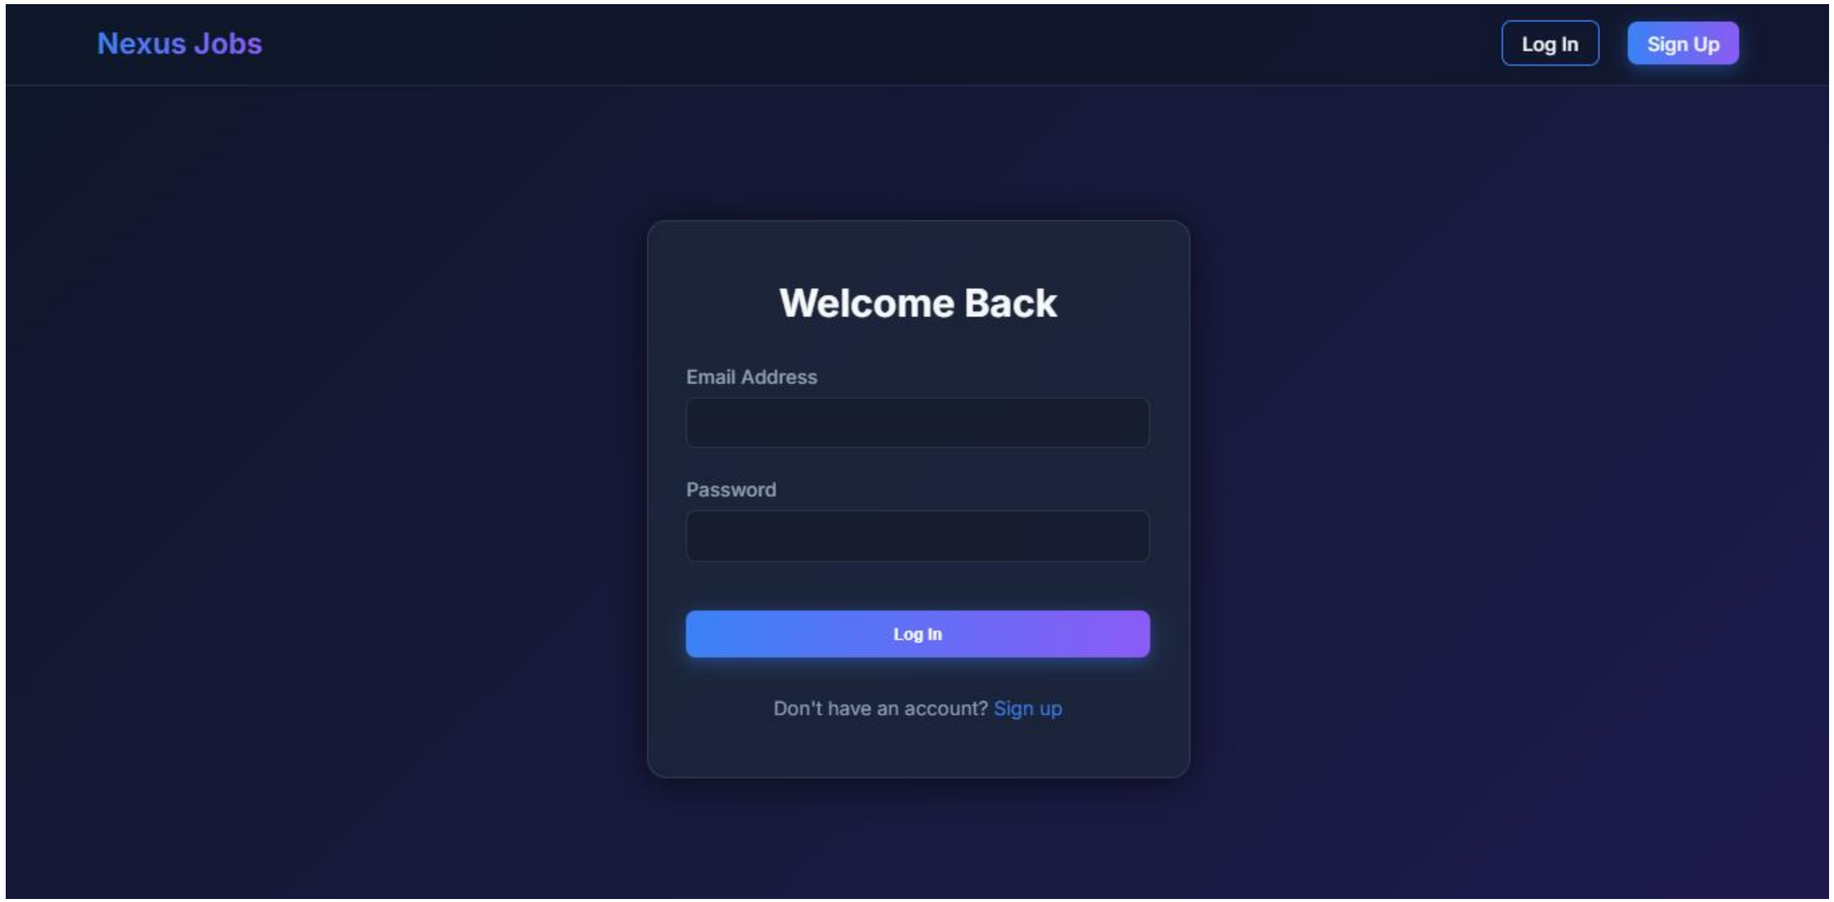
Module 5: Dashboard & Reporting
Displays dashboards for students and employers, showing job activities, application status, and basic insights.

IMPLEMENTATION SCREENSHOTS



This is the homepage of a job portal platform where users can connect with employers and explore career opportunities.
It provides options to sign up or log in and helps users get started with job searching or hiring.

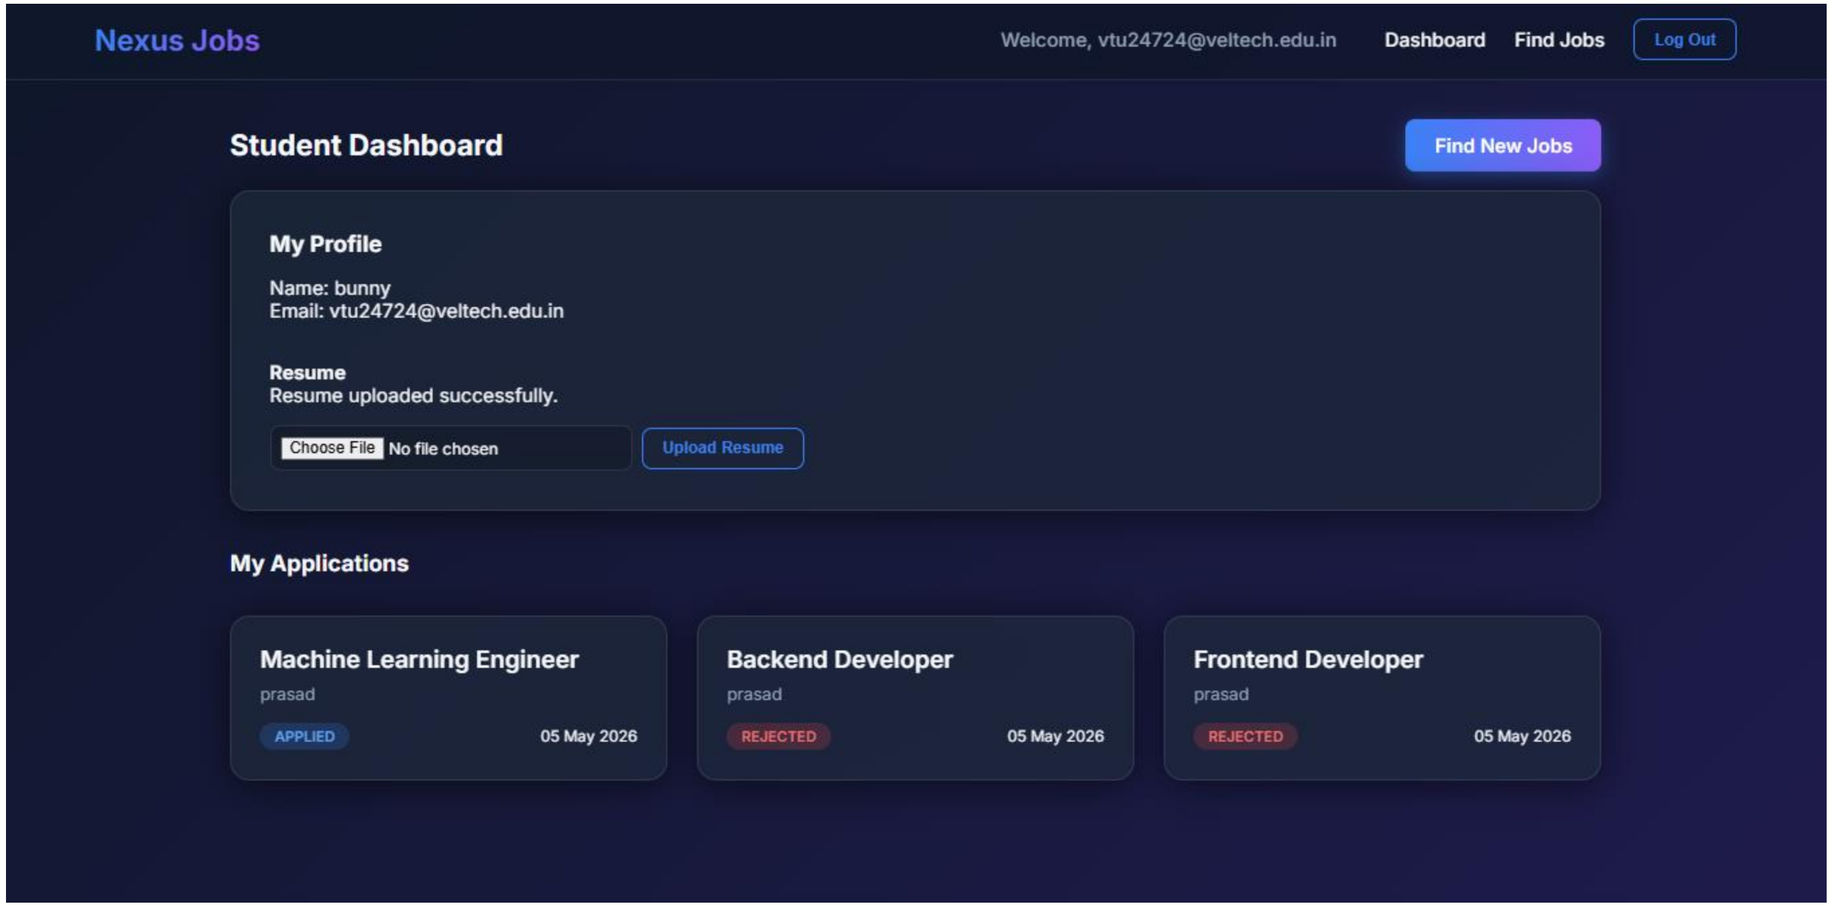
IMPLEMENTATION SCREENSHOTS



- **Login Page :**Allows students and employers to log into the system.
  Validates user credentials and redirects to respective dashboards.
  Ensures secure authentication using sessions.

IMPLEMENTATION SCREENSHOTS

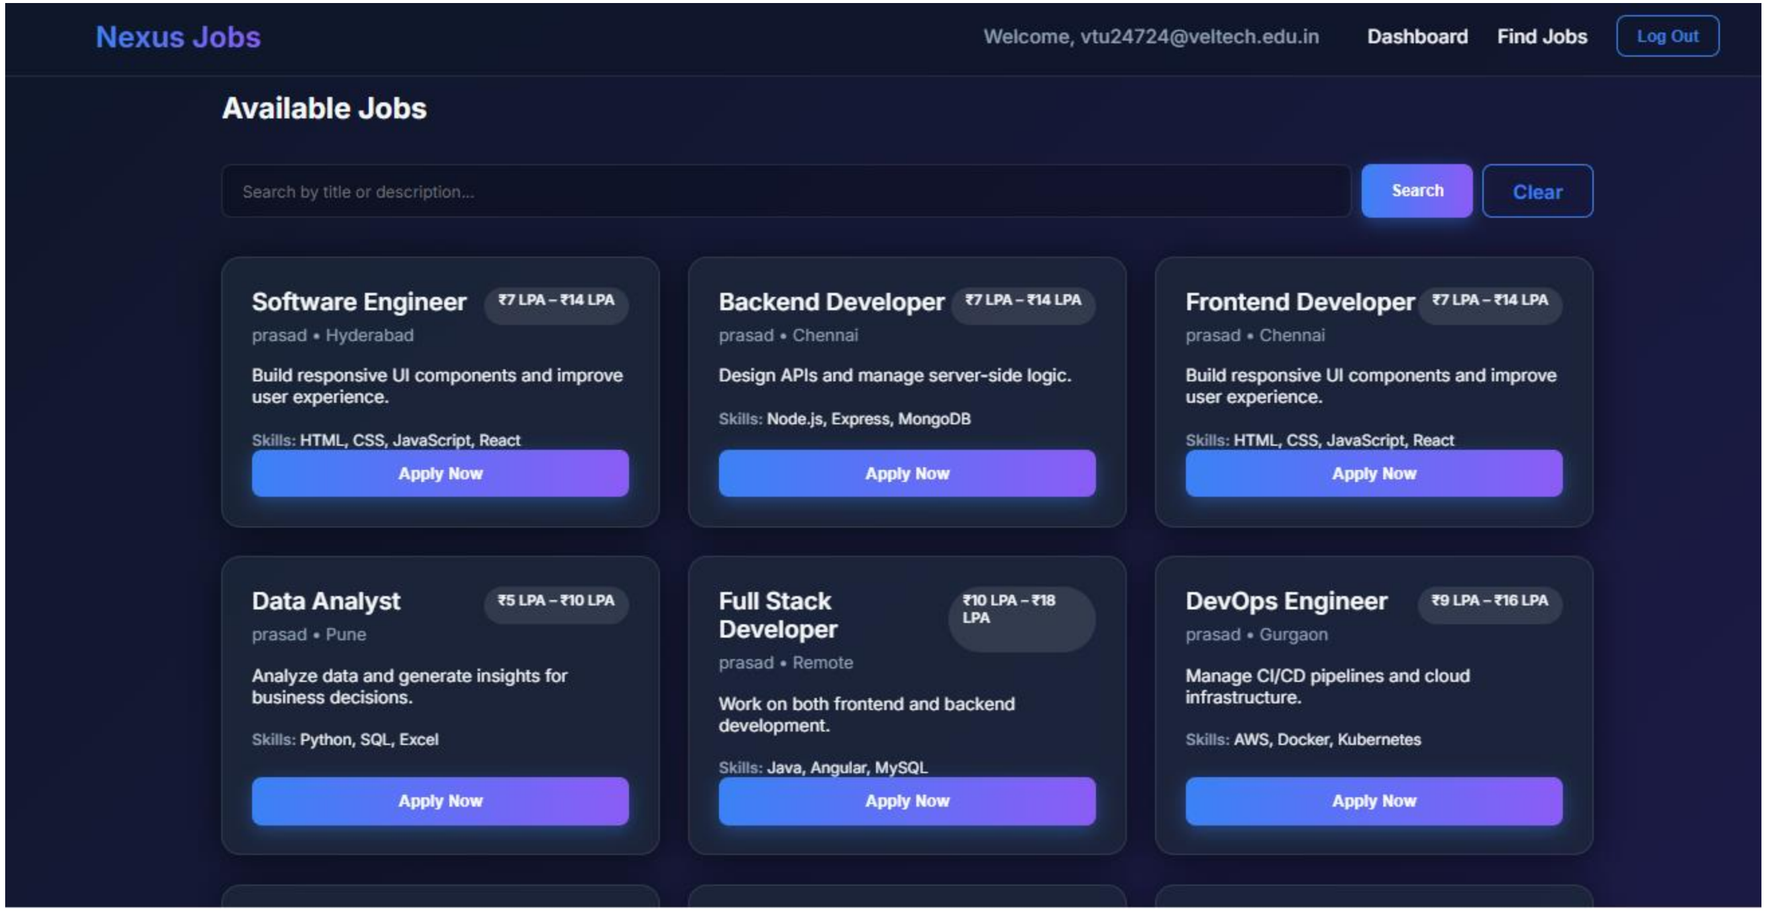
1
2
3
4
5
6
7
8(A)
9



Student Dashboard Page

Displays student options like jobs, applied jobs, and profile.
Provides navigation to different student functionalities.
Shows basic user information and updates.

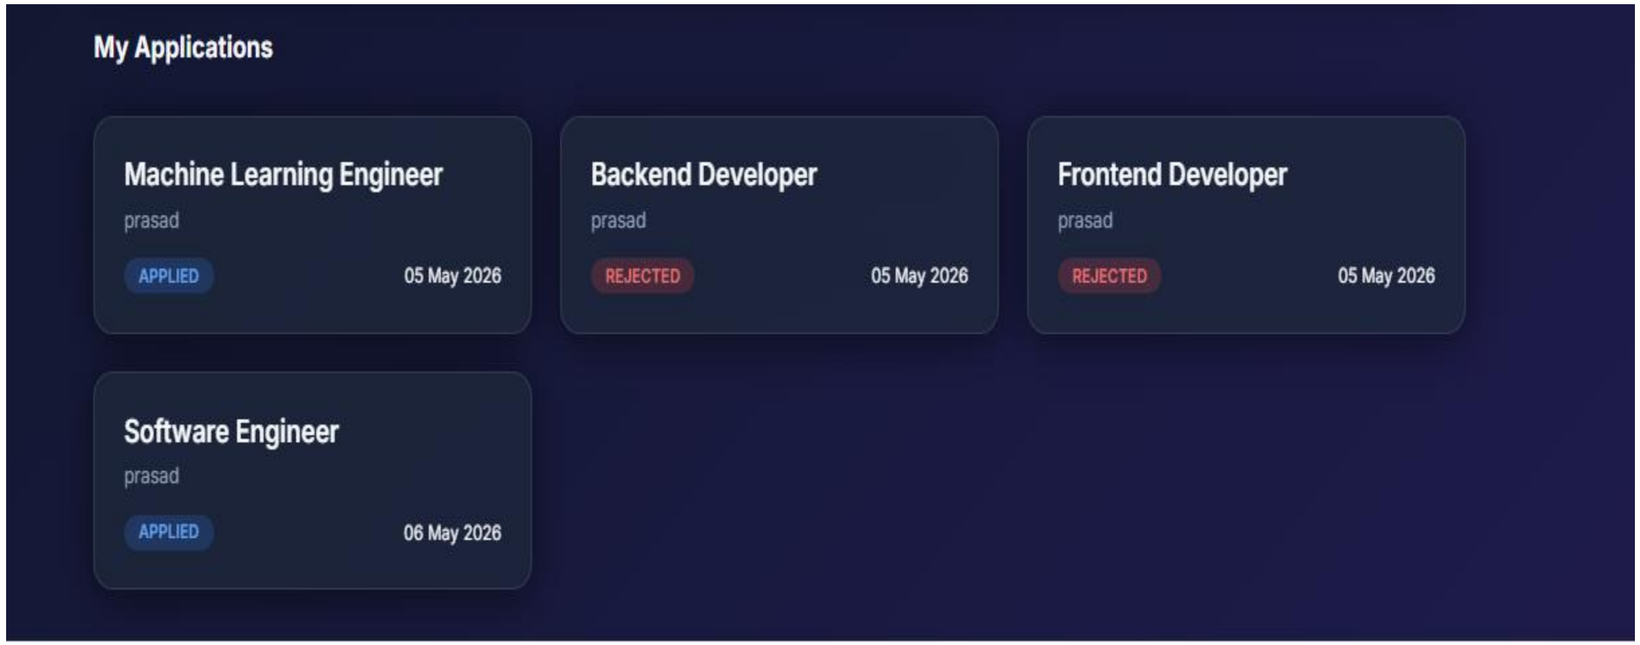
IMPLEMENTATION SCREENSHOTS



Jobs Page (Student)

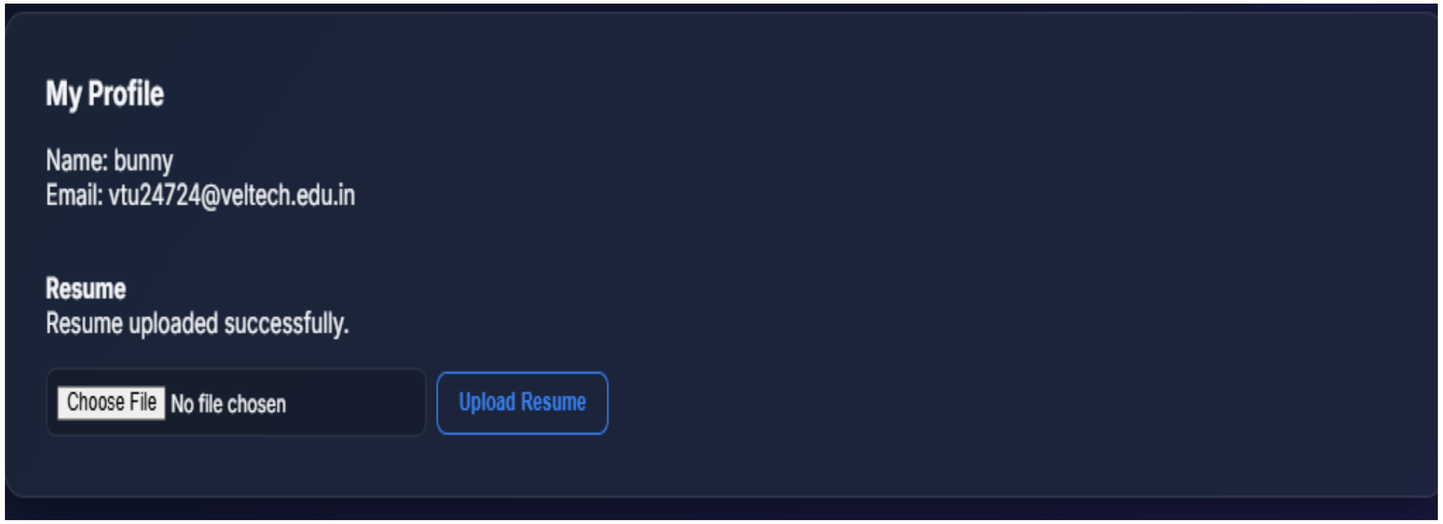
Displays all available job listings posted by employers.
Allows students to view job details and apply for jobs.
Stores application data in the system.

IMPLEMENTATION SCREENSHOTS



Applied Jobs Page
Shows jobs applied by the student.
Displays application status such as Applied, Shortlisted, or Rejected.
Helps users track their job applications.

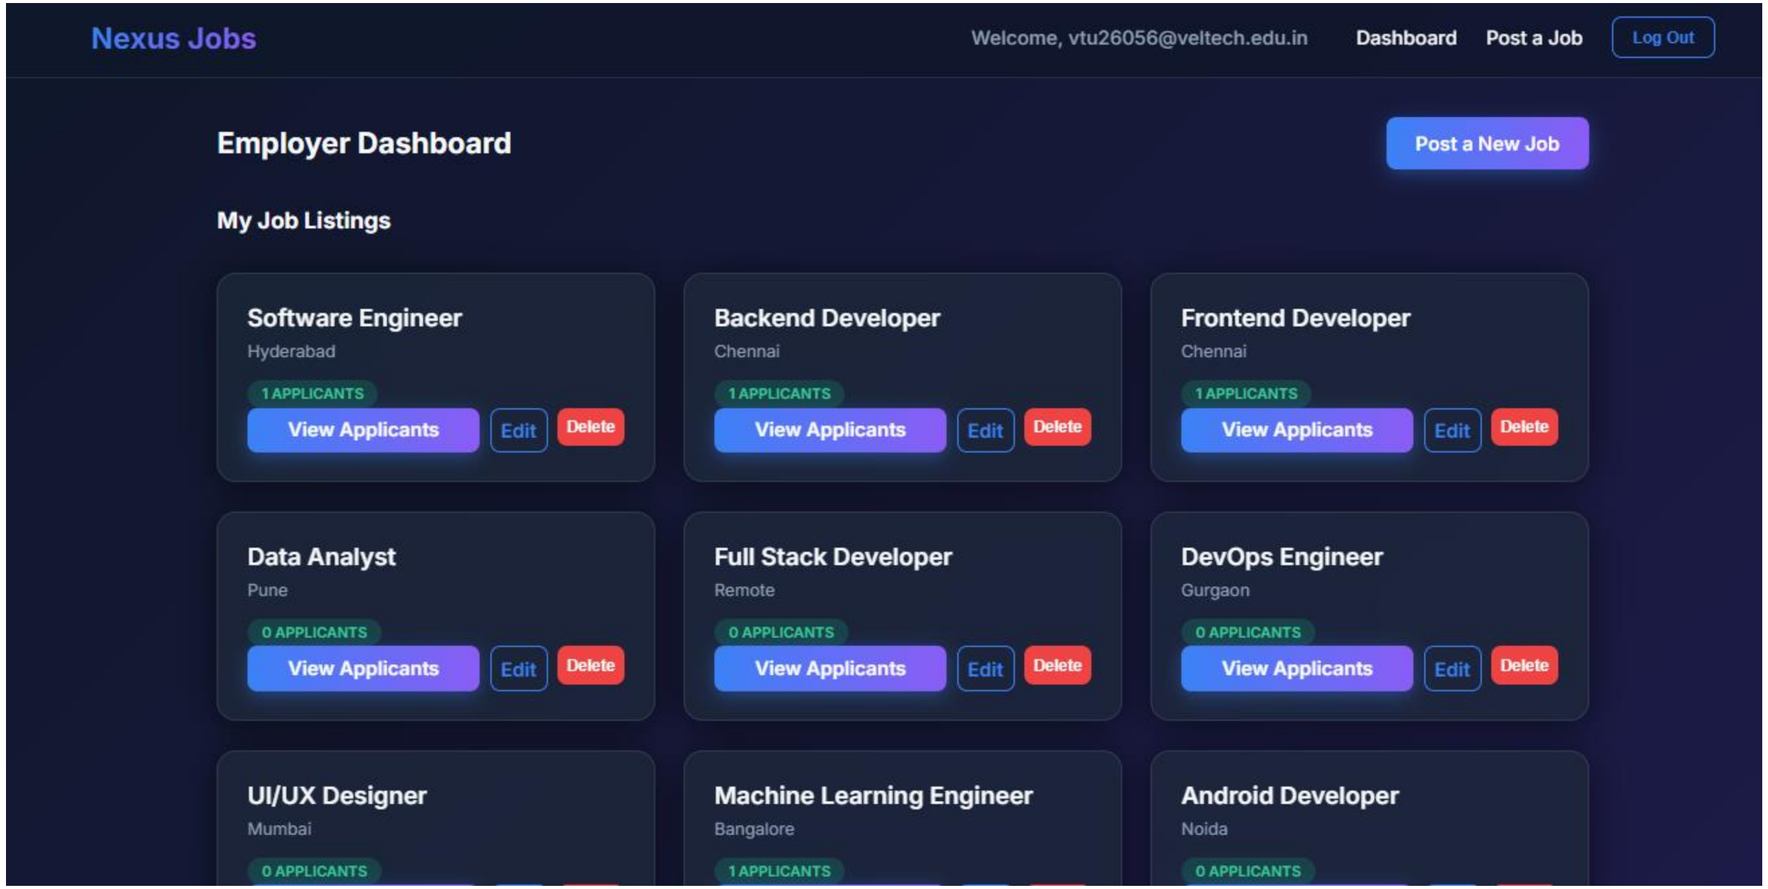
IMPLEMENTATION SCREENSHOTS



Profile Page

Displays user details like name, email, and role.
Allows users to view their personal information.
Can be extended to update profile and upload resume

IMPLEMENTATION SCREENSHOTS



Employer Dashboard Page

Provides options for employers to manage job postings.
Displays links to post jobs and view applicants.
Shows employer-related activities.

ADVANTAGES & LIMITATIONS

ADVANTAGES

Provides a centralized platform for job seekers and employers.

Saves time and effort in job searching and recruitment.

Allows easy job application and status tracking.

Improves communication between students and employers.

Accessible anytime through the web application.

LIMITATIONS

Requires stable internet connection.

Limited advanced features like AI-based job matching.

Security needs improvement for real-world usage.

Not suitable for handling very large-scale users.

No real-time notifications in the current system.

Thank you
